### Demand-side electrochemical energy storage

Why do we need electrochemical energy storage devices? Great energy consumption by the rapidly growing population has demanded the development of electrochemical energy storage devices with high power density, high energy density, and long cycle stability. What is electrochemical energy storage? The contemporary global energy landscape is characterized by a growing demand for efficient and sustainable energy storage solutions. Electrochemical energy storage technologies have emerged as pivotal players in addressing this demand, offering versatile and environmentally friendly means to store and harness electrical energy. How many electrochemical storage stations are there in China? In 2021, 194 electrochemical storage stations were put into operation, with a total stored energy of 7.9 GWh. These accounted for 60.2% of the total energy stored by stations in operation, a year-on-year increase of 176% (Figure 4). How secure are electrochemical energy storage technologies? Security of most electrochemical energy storage technologies are relatively controllable. But in terms of comprehensive technical performance, there is still a large gap from the demand of actual application, resulting in no economic advantage of the application. Are lithium-ion batteries a promising electrochemical energy storage device? Batteries (in particular, lithium-ion batteries), supercapacitors, and battery-supercapacitor hybrid devices are promising electrochemical energy storage devices. This review highlights recent progress in the development of lithium-ion batteries, supercapacitors, and battery-supercapacitor hybrid devices. What are the challenges and limitations of electrochemical energy storage technologies? Furthermore, recent breakthroughs and innovations in materials science, electrode design, and system integration are discussed in detail. Moreover, this review provides an unbiased perspective on the challenges and limitations facing electrochemical energy storage technologies, from resource availability to recycling concerns.
