What is a lithium battery pack? A lithium battery pack is a collection of individual lithium-ion or lithium-polymer cells grouped together to store and deliver electrical energy. These packs are widely used in applications such as electric vehicles, renewable energy systems, and portable electronics. What is a lithium primary battery? A lithium primary battery (Lithium Primary Battery) is a non-rechargeable battery that uses lithium metal or lithium compounds as the negative electrode material. Unlike rechargeable lithium-ion batteries, this type of battery is mainly used for one High safety and long life! What is a lithium battery management system (BMS)? The cells within a lithium battery pack are typically arranged in series or parallel configurations to achieve the desired voltage and capacity. Additionally, a Battery Management System (BMS) is often integrated to monitor and ensure the safe operation of the battery pack.
