Here are some examples: 5 %% 2 returns 1, because 2 goes into 5 two times and the remainder is 1 R-Operators Modulo Operator (%%) It returns the remainder after dividing the first operand by the second operand. Output: Logical Operators in R simulate element-wise decision operations, based on Operators in R R has a rich set of special operators like %/% for integer division or %% for modulus. Familiarize yourself with these to expand your coding toolkit. R is an evolving language. Stay updated with R Operators (With Examples) R Arithmetic Operators These operators are used to carry out mathematical operations like addition and multiplication. Here is a list of arithmetic operators available in R. Let's look at Operators in R with Examples The Modulo (%%) operator is used between two vectors to return the remainder when the first operand is divided by the second operand. # Perform arithamatic operation using %% operator R Arithmetic Operators If you want to display the output as an integer value by rounding the value, then use R Integer Division (%/%) operator. The following R Programming statement finds the exponent. r I think it is because % has often be associated with the modulus operator in many programming languages. It is the case, e.g., in C, C++, C# and Java, and many other languages which Maxeon Solar Panels | Invest in Solar -- Maxeon Solar Explore Maxeon Solar Panels for sustainable energy solutions.
