Mobile energy storage instead of generators

Are mobile battery energy storage systems a viable alternative to diesel generators? Mobile battery energy storage systems offer an alternative to diesel generators for temporary off-grid power. Alex Smith, co-founder and CTO of US-based provider Moxion Power looks at some of the technology's many applications and scopes out its future market development. Can mobile battery energy storage systems replace dirty generators? Fortunately, an innovative, cleaner solution is gaining traction to replace dirty generators: mobile battery energy storage systems (mobile BESS). Mobile BESS products provide mobile, temporary electricity wherever and whenever it's needed. Can mobile energy storage improve power grid resilience? As mobile energy storage is often coupled with mobile emergency generators or electric buses, those technologies are also considered in the review. Allocation of these resources for power grid resilience enhancement requires modeling of both the transportation system constraints and the power grid operational constraints. Can mobile battery storage replace diesel generators? Mobile battery storage solutions are starting to gain traction and have immense potential to replace diesel generators for off-grid power needs. Recent projections estimated the global temporary power market at \$12 billion in , growing to over US\$20 billion by --a compound annual growth rate of nearly 8%. Is mobile energy storage a viable alternative to fixed energy storage? Mobile energy storage can improve system flexibility, stability, and regional connectivity, and has the potential to serve as a supplement or even substitute for fixed energy storage in the future. However, there are few studies that comprehensively evaluate the operational performance and economy of fixed and mobile energy storage systems. How can mobile energy storage systems improve the economy? With the advancement of battery technology, such as increased energy density, cost reduction, and extended cycle life, the economy of mobile energy storage systems will be further improved. Future research should focus on the impact of new technologies on system performance and update model parameters in a timely manner.
