Can a Li-ion battery module be cooled by a mini-channel cooling plate? This thesis study proposes a unique liquid cooling method for a Li-ion battery module consisting of 40 cylindrical cells using mini-channel cooling plates. In this study, staggered arrangements of lithium-ion cells were investigated for coolant intake and the outlet passage. Do lithium-ion batteries need a multichannel wavy tube? Thermal management is essential for the lithium-ion batteries of electric vehicles to maintain a suitable temperature range and reduce local temperature differences. In this study, a multichannel wavy tube is proposed for a liquid cooling cylindrical lithium-ion battery module. What is a cylindrical battery? Currently, cylindrical batteries are being developed from an initial diameter of 18 mm to diameters of 21, 40, 46 mm, and more. These large-sized cylindrical batteries can be expected to be widely applied in markets including automotive driving power and energy storage. What is fluid cooling cylindrical battery thermal management system (BTMS)? Li et al. explored improvement for fluid cooling cylindrical battery thermal management system (BTMS). It is critical to reduce the temperature variance between individual cells. Greco et al. studied shows that Li-ion battery cells, battery-powered cars using thermal pipes. How are lithium-ion cells positioned for coolant intake and outlet passage? In this study, staggered arrangements of lithium-ion cells were investigated for coolant intake and the outlet passage. To improve heat dissipation performance, the cooling plates are positioned vertically along the height of the cells in a U-shaped pattern while tapping four spots, and liquid water is used as the coolant. Why is liquid cooling important for a lithium-ion battery pack? Sustaining a lithium-ion battery pack's optimal temperature, which depends heavily on the BTMS, ensures enhanced performance, extended lifespan, and safety. While liquid cooling has been the subject of extensive research for prismatic cells, limited work is in the field of utilization for cylindrical cells (round and hollow cells).
